

Ca⁺RE EQ™

THE LATEST IN SUPERIOR CARE AND NUTRITION FOR YOUR HORSE

Ca⁺:

Ca⁺RE EQ™ is a highly bioavailable marine algae derived calcium source, also providing magnesium and over 70 other trace minerals

RE:

Recovery and repair of healthy gut function and improved bone density and turnover

EQ:

Support for all classes of equines including foals, weanlings, yearlings, gestating and lactating mares, geldings, and stallions

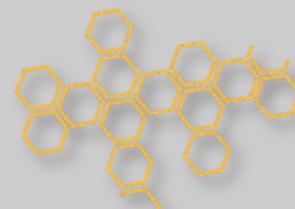

NATURAL MARINE SOURCE

Ca⁺RE EQ™ is sourced from calcified marine algae, listed on ingredient tags as "Calcite."

HIGH SURFACE AREA

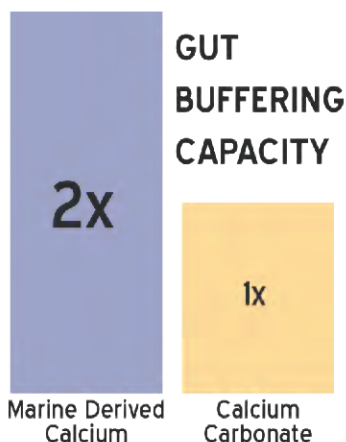

The unique microscopic honeycomb structure makes its minerals highly bioavailable and active in the horse's body.

SUPERIOR GUT HEALTH

Excessive acidity in the stomach is a primary factor in the development of gastric ulcers.

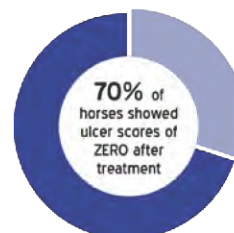

Marine derived calcium provides **DOUBLE THE GASTRIC BUFFERING CAPACITY** of traditionally used Calcium Carbonate, for superior pH regulation.

IMPROVED BONE DENSITY

Study results suggest increased bone density and turnover provided by marine derived calcium may help **reduce the likelihood of injury, and shorten recovery periods.**

In a group of horses with varying degrees of gastric ulceration, feeding an algae derived calcium source significantly reduced ulceration after 30 days.

Horses supplemented with marine derived minerals show **REDUCED REACTIVITY** to startling stimuli.
